$\qquad$
Fill in the blanks using the most appropriate word or phrase.

1. A solution is a $\qquad$ mixture of two or more substances.
2. Every solution is composed of a $\qquad$ which is normally present in the smaller amount and is the substance that is $\qquad$ , and a
$\qquad$ which is normally present in the greater amount and is the substance that does the dissolving.
3. A carbonated drink is an example of a $\qquad$ solute dissolved in a
$\qquad$ solvent; the final phase is that of a $\qquad$ . Air is an example of a $\qquad$ solution.
4. Liquids, such as antifreeze and water, which dissolve in one another are said to be $\qquad$ , while liquids that do not dissolve in one another, such as salad oil and vinegar, are said to be $\qquad$ .
5. Brass, a mixture of copper and zinc, is an example of a solid solution known as $a(n)$ $\qquad$ .
6. Because the particles in a solution are so small (molecules, $\qquad$ ,
or $\qquad$ ), filtration cannot be used to separate the components nor do the components settle upon standing.
7. $\qquad$ contain particles too large to be true solutions, and upon standing, separate. They are actually $\qquad$ mixtures and (can, can not) be separated by filtration. They also exhibit the $\qquad$
$\qquad$ which is the scattering of a beam of light.
but do not separate upon standing.
8. The rate of solution expresses how $\qquad$ a solute dissolves in a solvent.
9. Henry's Law: The $\qquad$ of a gas dissolved in a given volume of liquid is
$\qquad$ to the pressure of the gas.
10. For most solutes to be dissolved in liquid solvents:
-- as temperature increases the rate of solution $\qquad$
-- as surface area increases, the rate of solution $\qquad$
-- stirring or agitating the mixture $\qquad$ the rate of solution.
11. $\qquad$ are substances that conduct an electric current when dissolved. $\qquad$ are substances that do not conduct an electric current when dissolved.
12. A solution is $\qquad$ if it contains a relatively large amount of solute compared to the amount of solvent. A solution is $\qquad$ if it contains a relatively small amount of solute.
13. $\qquad$ is a measure of how much solute can dissolve in a given amount of solvent at a given temperature.
14. $\qquad$ properties depend only on the concentration of the solution. These properties include vapor pressure $\qquad$ freezing point $\qquad$ and boiling point $\qquad$ .

Define each of the following words.

1. aqueous:
2. tincture:
3. emulsion:
4. colligative properties:
5. "like dissolves like":

Answer each of the following questions completely.

1. Explain how a solution can be both dilute and saturated.
2. Why do we put antifreeze in car radiators in the summer as well as in the winter?
3. What will happen when a crystal of solute is added to an unsaturated solution?
4. What will happen when a crystal of solute is added to a supersaturated solution?
5. Normally, if the temperature is increased, the solubility of a solid solute
$\qquad$ . (For gaseous solutes, however, increasing the
temperature $\qquad$ solubility.)

## Use the following data to construct a

 solubility curve for $\mathrm{NH}_{4} \mathrm{Cl}$.Solubility of Ammonium Chloride

| Grams of <br> $\mathrm{NH}_{4} \mathrm{Cl}$ per <br> 100 g of $\mathrm{H}_{2} \mathrm{O}$ | Temperature <br> $\left({ }^{\circ} \mathrm{C}\right)$ |
| :---: | :---: |
| 30 | 0 |
| 35 | 15 |
| 40 | 25 |
| 50 | 50 |
| 60 | 70 |
| 71 | 90 |
| 74 | 95 |

## Use your graph to answer the following questions.

1. What is the solubility of ammonium chloride at $40^{\circ} \mathrm{C}$ ? $\qquad$
2. If 54 g of $\mathrm{NH}_{4} \mathrm{Cl}$ are dissolved at $68^{\circ} \mathrm{C}$, the solution is $\qquad$ .
3. If 54 g of $\mathrm{NH}_{4} \mathrm{Cl}$ are dissolved at $30^{\circ} \mathrm{C}$, how many grams don' $\dagger$ dissolve?

Answer each of the following questions about molarity. Show all work on the problems.

1. Describe, IN DETAIL, how to make one liter of a 1 M NaCl solution.
2. What is the molarity of a solution that contains 15.0 g NaCl in 1.25 L of solution?
3. A solution of HCl is 0.200 M . What mass of acid is dissolved in 250 mL of solution?
4. A solution of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ contains 65.0 g of solute dissolved in water to make a 3.00 M solution. What is the volume of the solution, in liters?
